YEAR 1
The goal of the PYG1 year is to become proficient at providing routine obstetrical care, pre- and post-operative care and ambulatory women’s care.

1. Obstetrics
   a. Be able to provide prenatal care for uncomplicated pregnancies
   b. Become competent to identify normal and abnormal labor, and develop labor plans
   c. Use the ACOG classification to interpret and understand electronic fetal heart rate monitoring during labor
   d. Become competent to perform without supervision uncomplicated vaginal deliveries
      i. Become competent to perform without supervision second degree vaginal and perineal lacerations
   e. Be able to provide routine post-delivery care and develop postpartum management plans
   f. Be able to perform Biophysical Profiles, limited obstetrical ultrasounds
   g. Become competent to perform with supervision an uncomplicated cesarean delivery
   h. Recognize obstetrical emergencies and complications
   i. Complete assigned workshops and readings

2. Gynecology
   a. Be able to identify the female pelvic anatomy intra-operatively
   b. Be able to perform a pre-operative assessment and complete pre-operative care, orders and planning for uncomplicated patients undergoing surgery
   c. Be able to perform a post-operative assessment and complete post-operative care, orders and planning for uncomplicated patients after surgery
   d. Be able to identify commonly used surgical instruments, suture, tools. Become proficient at tying knots, handling instruments (complete workshops)
   e. Become competent without supervision to open and close abdominal incisions
   f. Complete Laparoscopic curriculum and workshop, practice on LSC trainers to be able to complete basic laparoscopic skills on trainers
   g. Gain experience in diagnosing and managing gynecologic problems
   h. Gain experience in outpatient gynecologic procedures

3. Well-Women Care and Primary Care
   a. Be able to perform periodic health assessments, screening and prescribe health maintenance behaviors, which are age-appropriate (< 13 y/o; 13-18 y/o, 19-39 y/o, 40-64 y/o, >64 y/o).
   b. Prescribe and deliver appropriate contraception
YEAR 2
The goal of PGY2 year is to become experienced in managing acute obstetrical and gynecological emergencies and to gain experience in surgery

1. Obstetrics
   a. Be able to manage the “labor deck”: abnormal labor, obstetrical complications
   b. Be able to recognize and manage postpartum complications
   c. Be able to recognize and manage common obstetrical, medical and fetal complications
   d. Become competent to perform an uncomplicated cesarean delivery without supervision
   e. Gain competence in performing a basic obstetrical ultrasound with biometry (76816)

2. Gynecology
   a. Become an effective surgical assistant
   b. Develop a solid foundation of general surgical skills, instrument handling, knowing steps of procedures
   c. Recognize surgical complications and formulate initial management plans
   Identify and address comorbidities relevant to gyn surgery and institute prophylactic steps to reduce post-operative complications
   d. Be able to perform with competence uncomplicated gynecologic procedures
   e. Be able to prep patients for surgery
   f. Complete the endoscopic workshops successfully, demonstrating ability to properly insert endoscopic instruments
   g. Be able to diagnose and formulate care plans for Abdominal & pelvic pain, abnormal uterine bleeding, pelvic masses, first trimester bleeding

3. Well-Women Care and Primary Care
   a. Be able to assess and develop care plans for common non-reproductive medical disorders
   b. Be able to apply evidence based medicine and appropriate guidelines for women’s health maintenance

YEAR 3 and 4
During the last two years of residency, the resident gradually transitions from being able to:

1. Progress in all areas of surgery through becoming competent to perform with supervision to becoming competent to perform without supervision all major case types and procedures (assessed by completing surgical evaluations for individual cases and demonstrating his/her ability to perform each major case type without faculty first assist)
2. Progress in being able to assess, formulate care plans for increasingly complicated patients
3. Progress in being able to lead a medical team during OBGYN emergencies
4. Work collaborative with different specialties and OBGYN subspecialties to provide unified patient care, setting up joint conferences.
5. Demonstrate continual growth in taking the initiative in researching current, evidence-based medical guidelines and care recommendations, identifying pertinent journal articles relating to patient care and teaching other members of the health care team (Life-long learning)
6. Gain a solid background in the OBGYN subspecialties of maternal fetal medicine, oncology, urogynecology and reproductive endocrinology and infertility. Be able to work collaboratively in management of women requiring specialty care.

2
